

Cat's Eye

Cat's Eye

Active LED cat's eye - highly innovative and reliable solutions. Cat's eye in-pavement LED markers are the ideal solution for pedestrian crossings and dynamic delineation lane marking. COLOZUZ ultraflat road markers combine robust design and mechanical resistance with luminous excellence, flexible switch and flash mode, low energy-consumption and easy installation. Featuring daytime-visible LEDs, sealed electronics, scratch-resistant lenses and stainless steel light heads, COLOZUZ Cat's eye are durable, maintenance free and the ideal solution for dynamic delineation, lane guidance and pedestrian crossing warning applications. More signal impact and enhanced road safety is achieved when placing COLOZUZ Cat's eye as complementary warning device at black spots such as critical intersections, zebra and level-crossings, narrow curves, highway ramps, tunnels and zones with frequent fog conditions.

Cat's Eye

Application:

- Before crossing for pedestrians at a distance of several centimeters from the seat belt
- On dangerous intersections
- At the entrances and exits of motorways
- For narrowing roads
- At the entrances to the tunnels and in tunnels
- In areas where there is often a particularly fog
- To determine the reversible lanes of traffic

Features and Benefits

- Ultra-flat design with superior mechanical robustness
- High luminance ratio and light intensity
- Perfect daytime visibility, immune to phantom light
- Snowploughable top made of stainless steel
- Versions with mono- and bi-directional light output available
- Special optic with wide beam for pedestrians
- Aluminum version available on request
